Jordan Linton
Web developer

Summary

A Humble driven overworking web-developer who spends his whole day everyday building beautiful responsive web-applications/web-sites.
Learning all the latest tech stacks along the way.
Nov 2020

My Spark

Self Teaching python by Learning the basic data-type's , loops ,functions and conditionals to build a project which gave me the spark to persue it as a career

Experience

March 2021

School of Code

After quiting my job as a forklift driver for 6 year's to join the School Of Code they got me on track by making me build client based project's (check my Portfolio)

Alot of the project's built as a Team codewise was 90% built by me due to spending all day everyday learning adanced features such as the Reducer Hook mixed with useContex, allowed me to get ahead of my cohort giving me more time to make teaching video's that helped everyone in my team's succeed

Advanced Project

By far my Favourite project built was a *React* bike part booking system that had a signup account feature with **firebase** that allowed admin priveledge's with a postcode Api using *fetch* to display their location on a google map with a marker on the site so the admin could pickup/dropoff bikes, giving the admin acces to do **CRUD** operations on the site to accept , delete or update the user's booking status

All for free where as before he was paying £30+ a month+ for multiple software. I just merged them into one clean efficent app.

what makes me different

💬 other then every single day coding challange
 # 159 Day Streak and still going check LinkedIn / twitter for proof

💬 other then making a 10days of code-wars youtube challange
 # Check my youtube for proof

💬 other then my github looking like a christmas tree
 # Check my github repo's

My Misson

To work with an agile Team that has great chemistry, keeps the enviroment fun but knows how to work hard
 "work hard, play hard"
Also have a huge intrest in Freelancing , I love how intested clients get about their project, and how I can bring their applications to life, making things they never expected from a web-dev.
 "you are what you do repeatedly"

I also Enjoy helping people learn programming as I spent alot of my time during the bootcamp helping the rest of my cohort understand complex logic and then making usefull youtube video's demonstrating them
 "allways go above and beyond"

Interests

A love of Tech lead to automation, building voice controlled systems with software such as

- Eventghost
- IFTTT (If This Then That)
- Audino Raspberry pi -python/apache circuit boards

Gaming brought me to buy a expsensive pc-rig saving every penny i had at the time which gave me acces to alot of Hard Skills
